Geometry in the plane and 3D

Ez 1.

a) Calculate the determinant by expansion.

Let's just take row 1.

$$\det \left(\begin{bmatrix} 2 & -3 & 1 \\ -1 & 2 & 2 \\ 3 & -5 & 1 \end{bmatrix} \right) = 2 \cdot \det \left(\begin{bmatrix} 2 & 2 \\ -5 & 1 \end{bmatrix} \right) + 3 \cdot \det \left(\begin{bmatrix} -1 & 2 \\ 3 & 1 \end{bmatrix} \right) + \det \left(\begin{bmatrix} -1 & 2 \\ 3 & -5 \end{bmatrix} \right)$$

$$= 2 \cdot \left(2 + 10 \right) + 3 \left(-1 - 6 \right) + \left(5 - 6 \right)$$

$$= 2 \cdot \left(-2 \cdot 1 - 1 \right) = 2$$

b) Compute the rest by any method in your head.

$$\det \begin{pmatrix} \begin{pmatrix} 4 & 2 & 1 \\ 0 & 1 & 2 \\ 0 & 0 & 2 \end{pmatrix} \end{pmatrix} = 8 \qquad \det \begin{pmatrix} \begin{pmatrix} 2 & 0 & 0 \\ 3 & 5 & 0 \\ 9 & -4 & 3 \end{pmatrix} \end{pmatrix} = 30$$

$$\det \left(\begin{bmatrix} 2-i & 0 & 0 \\ 0 & 2+i & 0 \\ 0 & 0 & 1 \end{bmatrix} \right) = 5 \qquad \det \left(\begin{bmatrix} 4 & 2 & 1 \\ 1 & 1 & 2 \\ 1 & 1 & 2 \end{bmatrix} \right) = 0$$

$$\det \left(\begin{bmatrix} 4 & 2 & 1 \\ 1 & 1 & 2 \end{bmatrix} \right) = 0$$

Provide a parametric representation for A.

$$A = \{P \mid \vec{oP} = \underline{b} + \varkappa \underline{u} + \underline{y} \underline{v}, \varkappa \in [-2, -1] \text{ and } \underline{y} \in (-1, 1] \}.$$

a) give the coordinates for med in the basis

$$d_{m-} = \begin{bmatrix} 2 \\ \frac{1}{2} \\ 1 \end{bmatrix}$$

b) Let n = (a, b, d) be a new basis. Determine n = 1.

$$_{n} \stackrel{\checkmark}{-} = \begin{bmatrix} -2 \\ -\frac{1}{2} \\ 1 \end{bmatrix}$$

- En 4. Three geometric vectors are given.
 - a) Coordinates.

$$\underline{a} = \begin{bmatrix} 6 \\ 2 \end{bmatrix}, \quad \underline{b} = \begin{bmatrix} 2 \\ 4 \end{bmatrix}, \quad \underline{c} = \begin{bmatrix} -1 \\ 5 \end{bmatrix}$$

b) Length.

$$|\underline{b}| = \sqrt{2^2 + 4^2} = \sqrt{20} = 2\sqrt{5}$$

$$\left| \underline{C} \right| = \sqrt{\left(-1\right)^2 + 5^2} = \sqrt{26}$$

c) Compute the angle between a and b.

$$\cos(v) = \frac{\underline{a} \cdot \underline{b}}{|\underline{a}| |\underline{b}|} = \frac{20}{4\sqrt{50}} = \frac{20}{2\sqrt{2} \cdot \sqrt{100}} = \frac{20}{20\sqrt{2}} = \frac{\sqrt{2}}{2}$$

=>
$$v = \frac{\pi}{4}$$
 or 45°.

d) Compute the area of the parallelogram spanned by
$$\underline{a}$$
 and \underline{b} .

$$\det \begin{pmatrix} 6 & 2 \\ 2 & 4 \end{pmatrix} = 24 - 4 = 20.$$

$$|\underline{b}_{\underline{c}}| = \frac{\underline{b} \cdot \underline{c}}{|\underline{c}|} = \frac{18}{\sqrt{26}} = \frac{18\sqrt{26}}{26} = \frac{9\sqrt{26}}{13}$$

$$\underline{G}_{\underline{C}} = \frac{\underline{G} \cdot \underline{C}}{|\underline{C}|^2} = \frac{18}{26} \begin{bmatrix} -1 \\ 5 \end{bmatrix} = \frac{9}{13} \begin{bmatrix} -1 \\ 5 \end{bmatrix} = \frac{9}{13} \begin{bmatrix} -1 \\ \frac{45}{13} \end{bmatrix}.$$

$$a = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}, \quad b = \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix} \quad \text{and} \quad c = \begin{bmatrix} 3/2 \\ 1/2 \\ 3/2 \end{bmatrix}.$$

Bose area is given by | a x b |.

$$\underline{\alpha} \times \underline{G} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix} \times \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 2 \end{bmatrix}.$$

We can determine the height to be the length of c projected onto the Z-axis.

$$\leq_{\underline{k}} = \frac{\underline{c} \cdot \underline{k}}{|\underline{k}|^2} \quad \underline{k} = \frac{3/2}{1} \begin{bmatrix} c \\ o \\ 1 \end{bmatrix} = \begin{bmatrix} 0 \\ c \\ 3/2 \end{bmatrix}.$$

Now the volume can be determined as

$$\left| \underbrace{a \times b} \right| \left| \underbrace{c_k} \right| = 2 \frac{3}{2} = 3.$$

b) Repeat but use determinants.

$$\det \left(\begin{bmatrix} 1 & 1 & \frac{3}{2} \\ 0 & 2 & \frac{1}{2} \\ 0 & 0 & \frac{3}{2} \end{bmatrix} \right) = 1 \cdot 2 \cdot \frac{3}{2} = 3.$$

Ex6. Let

$$\underline{\alpha} = \begin{bmatrix} 3 \\ 1 \\ 5 \end{bmatrix}$$
, $\underline{b} = \begin{bmatrix} 2 \\ 3 \\ 4 \end{bmatrix}$ and $\underline{c} = \begin{bmatrix} -5 \\ 3 \\ 3 \end{bmatrix}$.

a) Find the determinant of [a b c]. Are the vectors linearly independent?

The determinant is 0, so the matrix is singular. As such there is linear dependence among the vectors.

(They do not span a parallelipiped/volume)

b) Write one of the vectors as a linear combinations of the other two.

$$-3a + 2b = c$$

Volume spanned by a, b and c is 0 as determined in a).

d) Using a and to together with a vector perpendicular to there two to span a volume of 187.

$$\underline{n} = \underline{a} \times \underline{b} = \begin{bmatrix} 3 \\ 5 \end{bmatrix} \times \begin{bmatrix} 2 \\ 3 \\ 9 \end{bmatrix} = \begin{bmatrix} -6 \\ -17 \\ 7 \end{bmatrix} \text{ and } \underline{n} \perp \underline{a} \text{ and } \underline{n} \perp \underline{b}.$$

$$\det \begin{pmatrix} 3 & 2 & -6 \\ 1 & 3 & -17 \\ 5 & 9 & 7 \end{pmatrix} = 63 - 170 - 54 + 90 + 459 - 14 = 374 \text{ and } \frac{187}{374} = \frac{1}{2}, \text{ so } m = \pm \frac{1}{2} \text{ n is a solution.}$$
